

Back Pain and Pregnancy

Keith Merritt, MD

Why Pregnancy Causes Back Pain

- Hormonal changes of pregnancy make all joints, including the back, weak and less stable
- The enlarging uterus distorts the spine
- Stomach muscles, which help support the spine, stretch and weaken
- Weight gain and changes in posture double the force on the joints of the spine and pelvis
- Fluid retention adds to weakness of tissue that helps support the spine
- Distortion may cause or worsen shifting of lower spine joints
- Disc herniation rarely causes back pain in pregnancy

Prevention

- Before pregnancy, work toward your ideal body weight
- Before pregnancy, exercise to strengthen your stomach and back muscles
- Eat a healthy diet and exercise during pregnancy to optimize weight gain
 - See separate chapters on diet and exercise during pregnancy
- Wear low heeled (not flat) shoes with good arch supports
- If you must stand for long periods, alternate placing one foot then the other on a low foot stool
- Do not lift objects, including toddlers, over 25 pounds
- Squat, bend your knees and keep your back straight when lifting
- Use a moderately firm mattress

- Place a body pillow between your legs to prevent crossing them when sleeping
- Use a chair with good lower back support
- Consider yoga taught back a certified perinatal yoga instructor

Treatment

- Ice the area of pain two to four times daily for 45 to 60 minutes
 - Packs of frozen vegetables make great, reusable ice packs
 - Change out packs as they warm
 - Want area to be numb for around 30 minutes
 - Once iced, stretch the muscles in the area of pain then walk for a few minutes on flat ground
- May take Tylenol before icing
 - Check with your doctor before taking any other pain medicines
- Maternity belts (“pregnancy girdles”) are helpful
 - Quality Home Health Care in Sanford, any maternity store
- Consider referral for physical therapy if covered by your insurance
- Take time each day, if possible, to lay on your side with your knees and hips bent
 - Place a body pillow between your legs and a pillow beneath your belly
