2021 Subsidized Shelterbelt Program Launch

October 28, 2020

I am proud to announce the launch of HELP's 2021 Subsidized Shelterbelt Program. The program is open to any municipality, community group or private landowner for any purpose in tree planting including but not limited to:

- Shelterbelts, Stream Margin Forest Buffers, Wildlife Habitat Plantings
- Parks
- Street Boulevards
- Tree distributions by municipalities, non-for-profits or companies to the public
- Phytoremediation applications including but not limited to:
 - salinity control around lagoons
 - tree caps for decommissioned landfill for leachate control
 - forest filters on flood plains below landfills
 - effluent irrigation woodlots and much more

Great News About HELP Current Crop of Tree Seedlings

HELP has produced the largest stem size near double that of the past crops! In addition, our research/development unit is producing longer roots to create more drought resistant willows.

In addition to all regular varieties, HELP has doubled its production of the trees of highest demand ie: the Prairie Sky and Okanese poplar and has greatly increased its production of all willow varieties, as well as the three principal evergreen varieties of Blue Spruce, White Spruce and Scot's Pine. HELP is also proud to announce the majestic North West Poplar and Bebs Willow as new varieties available for public sale.

Three ways to order:

- On Line: www.help-shelterbelts.com and click on 'store'
- Mail in paper order with cheque payment
- By phone to 306-861-0814

HELP also offers on contract:

- Site Assessment and Planning Services
- Planting/Plastic Mulching/Living Mulch Grassing Services
