

Question and Answers

TOPIC(S):

USDA – AUS Error

QUESTION:

Do you know of any way to run GUS without having to put in 6 things that trigger an application?

ANSWER:

It is acceptable to add “TBD” into GUS directly in order to see if you will receive an accept risk finding for a borrower with possible higher ratios. Just make sure to NOT enter that into MBOT, but GUS Directly after you export from MBOT and Import to GUS.
