

I Be Strokin'!

Everything I Learned About Large Vessel Occlusion, I Learned From Clarence Carter

Kelly Grayson, NRP, CCP

You've all heard the song; you're probably singing it in your head right now. In fact, there are a number of things we can learn about the recognition, management, and documentation of stroke from the classic Clarence Carter party hit *Strokin'*. Join Kelly Grayson as he shows us how to use the lyrics of *Strokin'* to remember the most important things about stroke.

Vascular Zebras
Travis Hovde, MD, PhD

Some in the medical field have been taught that, "when you hear hoof-beats behind you, don't expect to see a zebra." In other words, look for or expect the more common and usual, not the rare or surprising, diagnosis.

The reality is that sometimes when you hear hoof-beats, it IS a zebra and you better know how to react. As the husband of a Vascular Ehlers Danlos Syndrome (VEDS) Travis will give you look at some rare vascular diseases that can challenge our critical thinking skills and how we care for all rare disease or special needs patients.

Tuesday October 27, 2:00-3:30 PM
NCCP : MEDICAL

Pressor Pressure
Presented by:
David Hodge, EMT-P & Paramedic, EMT

Our patient's blood pressure is low, and their mental status is altered. They are not responding to repeat fluid boluses. We will discuss different pressors and when they can be used and what other pressors they can be used in conjunction with.

We will focus on both the pre-hospital and inter-facility settings with an emphasis on the latter.

EMS on the Fireground:
Complacency and Inaction Can Be Deadly!
Travis Howe, DCEMT

It is true; firefighter LODD's have decreased over the past decade, but in many ways, present day structural fires are more dangerous than ever for those on the fireground. Firefighters are still dying of cardiac arrest, harmful carcinogens are making a name for themselves, and victims are always a possibility. This is why EMS must be proactive and ready on the fireground. Complacency kill instantly or over time. Join Travis as he dives into the why's and how's of fire scene readiness, safety, firefighter mortality, high quality incident monitor-

Advanced 12 Lead ECG

How are your 12 lead interpretation skills?

This class will discuss and clarify common myths such as right-sided MI vs inferior MI. We will also discuss posterior wall MI, Left Coronary Dominance, Wellen's syndrome and others.

At the conclusion of this course, the learner will understand and be able to describe coronary artery anatomy and how it affects ACS. At the conclusion of this course, the learner will understand and be able to describe right ventricular MI and how it affects patient treatment. At the conclusion of this course, the learner will understand and be able to describe Sgarbossa's criteria and how it will affect 12 lead ECG.

Airway Fu...

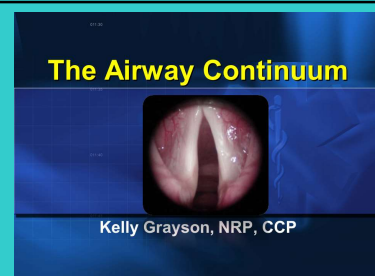

Black Belt Airway Tactics for BLS Providers
Kelly Grayson, NRP, CCEMT-P

No matter who is holding the laryngoscope, airway management is a team sport. It doesn't matter if the medic wields his 'scope with all the panache of an airway samurai, a skilled set of hands to assist in the procedure often spells the difference between success and failure. This presentation will discuss ALS-assist skills for endotracheal intubation, supraglottic airway insertion, BVM ventilation, pre-oxygenation and airway positioning, and other tips and tricks for BLS airway management.
