

Folkestone and Hythe Birds

Tetrad Guide: TR23 J

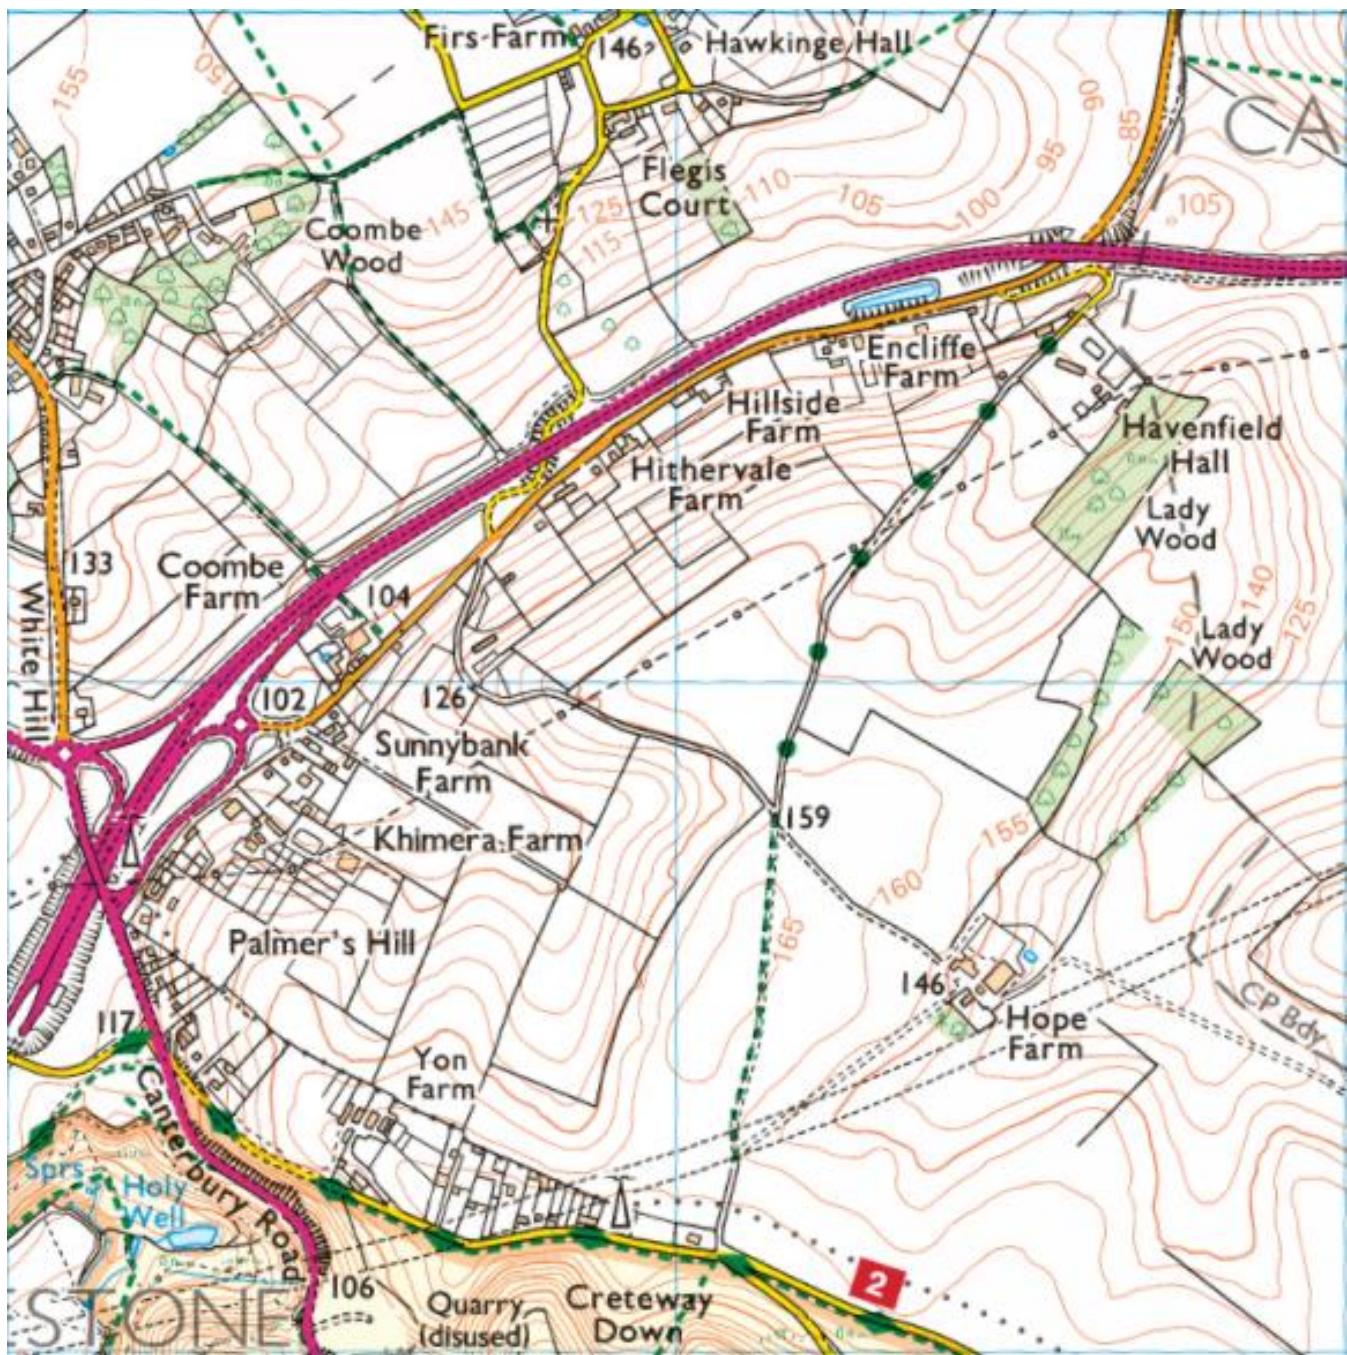

(Creteway Down, Holy Well and the Hope Farm area)

Introduction

Part of the Folkestone to Etchinghill Escarpment SSSI runs along the southern boundary of the tetrad, from the eastern part of Round Hill to the top of Smallpox Hill. There is a spring at Holy Well which feeds a small pond and gives rise to some boggy areas. The land to the north of the escarpment is mostly arable, with a couple of small woods (Lady Wood and Coombe Wood).

Habitats and birds

Most of the interest in this tetrad is provided by the section of the Folkestone Downs escarpment that runs along the southern boundary. Creteway Down attracts good numbers of common migrants in season and scarcer species have included Long-eared Owl, Firecrest, Garden and Grasshopper Warblers, Spotted and Pied Flycatchers, Nightingale and Redstart, whilst it is a regular haunt for Ring Ouzel in autumn.

The Downs provide a good vantage point for recording visual migration and more notable species have included Honey Buzzard, Red Kite, Marsh Harrier, Merlin, Golden Plover, Ruff, Short-eared Owl and Hawfinch.

The spring at Holy Well holds breeding Moorhen and wintering Water Rail, and occasionally Woodcock, whilst Firecrest, Nightingale and Black Redstart have also occurred.

The land to the north of the escarpment, inland of Crete Road East, can produce Wheatear and Whinchat, particularly if left as stubble in autumn, and a Tawny Pipit was seen in September 1993. Large numbers of Mediterranean Gulls can often be found in late summer/early autumn. The Hope Farm area was one of the last remaining haunts of Turtle Dove and Corn Buntings also formerly bred here.

Waxwings have twice been noted in the tetrad – a flock of 12 by Encliffe Farm in January 2011 and a flock of about 20 by Coombe Farm in January 2013.

Access and parking

There are several lay-bys along Crete Road East which enable access to Creteway Down and also along Crete Road West which enable access to Holy Well. The Folkestone to Canterbury bus passes along Canterbury Road.

Bird species diversity

An overall total of 108 species have been recorded within the tetrad, which ranks as the 22nd richest in diversity amongst the 31 local tetrads as the table below demonstrates. The number of breeding and wintering species relate to those recorded in the 2007-2013 BTO/KOS atlas fieldwork.

	Total	Rank/31
Breeding species	47	16 th
Wintering species	55	24 th
Species recorded	108	22 nd

The full list of species that have been recorded is provided as Appendix 1.

Other Natural History

The tetrad contains part of the Folkestone Escarpment SSSI – an extensive area of chalk grassland and scrub located on the steep escarpment between Etchinghill and Capel-le-Ferne. This site is one of the largest remaining areas of unimproved chalk downland in Kent.

The escarpment holds a good selection of butterflies including Dingy Skipper, Silver-spotted Skipper, Brimstone, Wall, Green Hairstreak, Marbled White, Brown Argus, Adonis Blue and Chalk Hill Blue, whilst the migrant species Clouded Yellow and Painted Lady are seen regularly, with a peak count of 280 of the latter at Hope Farm during a large influx in May 2009.

Moths include the rare Straw Belle, which restricted to a few sites on the North Downs and one in Surrey, and several other species that are characteristic of downland including *Dichrorampha petiverella* (Common Drill), *Agonopterix pallorella* (Pale Flat-body), *Udea lutealis* (Pale Straw Pearl), Six-spot and Narrow-bordered Five-spot Burnets, Chalk Carpet, Common Heath, Rest Harrow, Small Purple-barred, Clouded Buff, Burnet Companion, Mother Shipton and Small Yellow Underwing.

Trapping undertaken in 2000 produced the only recent record of Double Kidney together with a good array of other species including *Hypochalcia ahenella* (Dingy Knot-horn), Wood Carpet, Sloe Pug, Large Thorn, Scalloped Hazel, the Annulet, Brown-veined Wainscot, Broom Moth and Brown-line Bright-eye, but recording since appears to have been limited to casual observations.

There are a number of historical records of some significance. The only certain occurrence of the Wood Tiger locally was at Lady Wood, where Henry Ullyett caught several specimens in June 1869 (though it was described by Morley (1931) as being not uncommon in the Folkestone district, but without specific details), and the only confirmed area record of Plumed Prominent occurred in the tetrad in 1904. The only area record of *Euspilapteryx auroguttella* (Gold-dot Slender) was found here in 1981, whilst in 1991 the only area record of Dark Brocade, the first record of Mathew's Wainscot and the most recent sighting of Common Fan-foot occurred.

The south-facing slopes are perfect for Adders and other reptiles and some arthropod groups have been well-documented here, including the spiders (with nearly 80 species), beetles (with over 160 species), true flies (with 490 species) and wasps, bees and ants (with 86 species).

The escarpment is home to the rare Late Spider Orchid and various other orchid species including Early Spider, Bee, Lizard, Fragrant and Pyramidal.

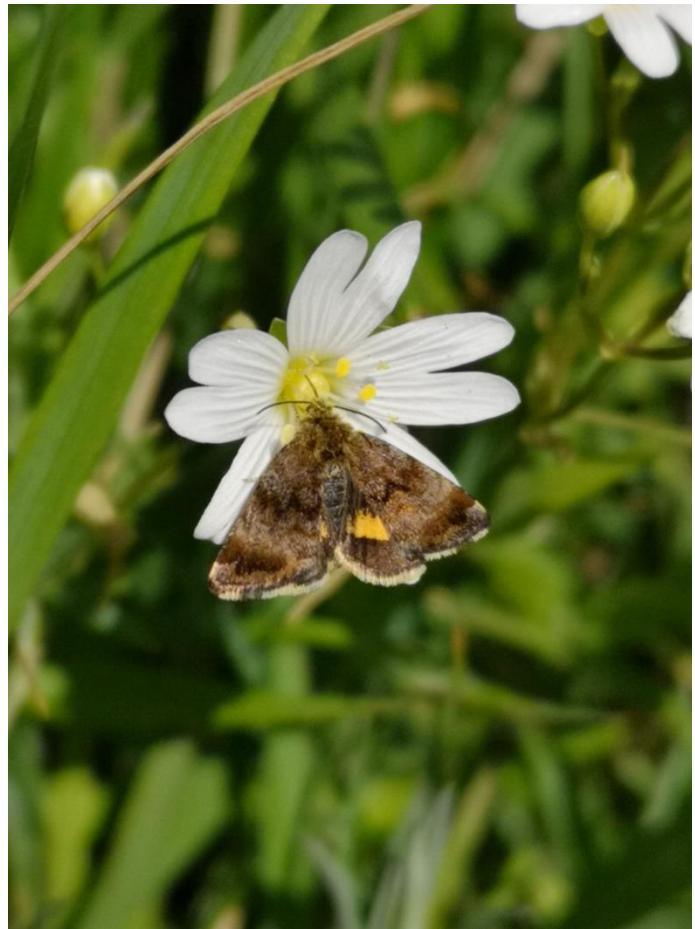

Among the dense scrub at Holywell is a marshy area dominated by Great Willowherb and Hemp-agrimony. A number of springs emerge from the foot of the escarpment.

Holywell Coombe is a key geological reference site due to its highly fossiliferous sequence of deposits from the late Pleistocene and Holocene periods that line the valley floor. These have yielded a molluscan succession of particular importance, providing a record of environmental change throughout the past 13,000 years. Waterlogging of the basal deposits has prevented oxidation, leading to the preservation of a range of organic fossils, such as plant and insect remains, that normally do not survive in calcareous environments.

A list of all species recorded in the tetrad is provided below in Appendix 2.

General History

An early Bronze Age site has been discovered at Holywell Coombe, with evidence of prehistoric farming, including plough marks found in the buried land surface. Pig and cow bone was also found and postholes indicated that enclosures or structures were present. A few shards of Neolithic pottery were also uncovered.

The freshwater spring between the Canterbury Road and Sugarloaf Hill is known as the Holy Well. It has been suggested that pilgrims to the shrine of St Thomas à Becket used to drink here as the old highway to Canterbury runs close by, and it is sometimes referred to as St. Thomas's Well. Legend has it that Henry II drank here when he went to do penance at the Cathedral whose Archbishop he had murdered and martyred but this would be impossible to validate.
