All the information in this Catalogue - Quality FootCare Products - is published in good faith and for general information purpose only. Quality FootCare does not make any warranties about the completeness, reliability and accuracy of this information. Any action you take upon the information you find in this catalogue (Quality FootCare Products), is strictly at your own risk. Quality FootCare Products will not be liable for any losses and/or damages in connection with the use of our catalogue.

PRODUCT DESCRIPTIONS

Products displayed in the Quality FootCare Products catalogue attempt to be as accurate as possible. However, Quality FootCare Products does not warrant that those product descriptions or other information is accurate, complete, reliable, current, or error-free. If a product offered by Quality FootCare Products is not as described, your sole remedy is to contact Quality FootCare Products within 48 hours of receipt and Quality FootCare Products reserves the right to provide a solution as per its discretion. Although Quality FootCare Products prides ourselves on customer satisfaction - Quality FootCare Products are not liable to issue any refunds or allow exchanges and/or returns.

PRODUCT COMPLIANCE

Products displayed/sold in the Quality FootCare Products catalogue meet all professional requirements within the required industry standards.

PRODUCT PRICING DISCLAIMER

The prices displayed in our catalogue may differ from prices that are available in-store. Prices shown in the catalogue are subject to change without prior notice. These prices may not necessarily include shipping and taxes which may be extra as applicable.

INACCURACY DISCLAIMER

From time to time there may be information in our catalogue that may contain typographical errors, inaccuracies, or omissions that may relate to product descriptions, pricing, and availability. Quality FootCare Products reserves the right to correct any errors, inaccuracies or omissions and to change or update information at any time without prior notice.

CONSENT

By using our catalogue, you hereby consent to our disclaimer and agree to its terms.

UPDATE

Should we update, amend or make any changes to this document, those changes will be prominently posted here.

An investment in quality!

Quality FootCare Products has been supplying podiatry and chiropody professionals since 1995. We are proud to say that QFC may be the best resource for equipment, instruments and general quality supplies for the podiatric industry. With competitive pricing and attentive personalized service.

Our promise to you is to provide quality products at fair and reasonable prices. Our goal is to find ways to save you money without compromising on quality. We promise to do that by processing and shipping your orders accurately and efficiently. Lastly but certainly not least - we promise to keep current with the newest products available and dedicate ourselves to the satisfaction of you, our customers.

How to Order

We make it easy for you to order.

You may order by fax, email or phone. We even provide a \$2 discount on most emailed or faxed orders. If you are new to us, we would request that you pay your first order by credit card. (Hospitals, Family Health Teams and many organizations are exempt from this - please call if you have any questions.) Once established you will be entitled to thirty days free credit - pay after you have received your orders. In most cases product returns or exchanges require only a phone call or email to let us know what you might be returning. We request that instruments be wrapped so that they are protected during transit.

Should any of our products require attention at any time, please call us at 1-866-833-9352 or email us at quality@qfootcare.com.

We do not have a retail location yet- but we will do everything we can to make sure your order is delivered safely to your door. We do have showrooms where we are able to display equipment - please call for an appointment if you are interested.

FAQ: free shipping, mininum orders, etc.

We provide free shipping on most orders over \$100. Most orders under \$100 are charged a small shipping and handling charge of \$10 or slightly more for heavy, bulky or difficult to ship orders.

Back-orders are almost always shipped free of charge. We request that you try to meet our minimum order of \$50, but in urgent situations please call and we will see what is possible.

The majority of our orders are shipped the day after they are placed by expedited parcel post. Delivery varies from one to five business days. You can visit www.canadapost.ca for more details.

If you require more urgent delivery, please inform us of your needs when you place the order. Expedited parcel is not a guaranteed service.

If you are not 100% happy with your order, please contact us.

PRICE MATCHING - In those rare occasions our prices are not the lowest we will endeavour to match whatever deal you have found. There are some exclusions and exceptions.

How to return goods

At Quality FootCare, we make it easy for you to return products.

The most important information we need is your invoice number and what you are requesting (replacement, credit, refund, etc. included with your return). The pdf file (Return Merchandise Form) that can be found on our website makes it very easy to return merchandise without the bother of getting an RMA or RGA number.

A guide entitled, "Recommended Procedures for Care, Maintenance and Sterilization of QFC Surgical Instruments" is available on page 68.

All QFC instruments are supplied non-sterile unless specified otherwise. When you purchase QFC instruments, you are investing in quality products. Care and maintenance will prolong their lives and afford the user with many years of trouble free service.

After removing from packaging, QFC instruments should be cleaned and sterilized before use.

During cleaning and sterilization cycles do not mix dissimilar metal instruments. Keep stainless steel/chromium-plated/silver-plated instruments etc. separate and do not process in the same cycle; otherwise corrosion or staining may occur on the stainless steel instruments. In all procedures, ensure that the instruments are in their unlocked, open positions and that the joints are exposed to the cleaning/sterilizing processes. If instruments are locked during sterilizing, stresses in the joints will be produced which will eventually weaken the joints and lead to fracture.

Leasing

- 100% financingNo annual review or audits
- Doesn't affect credit lines
- Payment is fixed
- Easy to budget and plan for the futureConserves cash for operating costs
- Pay as you profit from equipment
 Some Leases are tax deductible
- User friendly, personalized service
- Early purchase options available
 Flexible to meet your needs
- Fast credit turnaround
- Faster tax write off possible

Borrowing

- Various user fees charged
- Down payments common
- Floating rates
- Premiums charged to lock
- Affects credit lines
- Reduces borrowing power
- Subject to annual review
- Maintenance fees charged
- Credit turnaround slower
- Fees raise effective rates
- Less customer service oriented
- Less flexibility in terms

When you require instruments that are "sterile to the point of use" The Elara delivers!

Elara 11 Class B Autoclave

Chamber Dimensions Chamber Volume 11" x 20" Chamber 28.5L

The Elara 11 is designed for sterilization of wrapped, porous and hollow loads.

- Short cycle and high volume pre and post vacuum pump for perfect class B sterilization results
- 316L grade stainless steel chamber/door with electro-polish finish
- A built-in steam generator provides steam and facilitates a standby steam mode
- The door closes smoothly and locks automatically

Water Distiller

Tuttnauer offers a distiller that provides pure water that is 99% free of total dissolved solids. These distillers eliminate the inconvenience and expense of buying bottled water. Their ease of operation makes them ideal for any medical, dental or laboratory application.

- Automatic Shut-Off
- Stainless Steel
- Non Aluminum Condenser

Chamber Brite

Effectively cleans and descales the chamber reservoir and tubing of most steam autoclaves.

- CB0010 (10/bx)
- Pre-measured packs
- No pre-mixing required
- Usage promotes efficiency
- Easy to store and odour-free

autoclaves

The only gravity autoclave upgradable to pre/post vacuum by software!!!

T-Edge Autoclave

- Larger chamber capacity and shorter cycle times
- 10" and 11" Chambers
- Convenient and easy loading with door opening to 1100 - Available in 110V and 220V

Enbio S Autoclave

- Another dimension
- Same great efficiency
- Up to 6 time smaller and 3x lighter than a typical Class B Autoclave
- Cycle time with drying 12-15 minutes
- Easily serviceable
- Class B Autoclave

Cassette Sterilizers

Statim 5000 G4

- Ultra-fast 9 minute unwrapped cycle
- 17.5 minute wrapped cycle
- Exceptional instrument turnover
- Single use water
- 15 minute Dri-TecR **Drying Technology**
- Aseptic transfer of instruments
- Reduced instrument investment
- Prolongs instrument life

biological & chemical indicators

Chemical Integrators

STEAMPlus is an immediate readout Class 5 device approved for use in all steam cycles. This four inch strip has distinct pass/fail criteria and is cleared by the FDA as equivalent in performance to a biological indicator. This technology offers the highest level of sterility assurance in the form of a chemical indicator,

but does not replace the routine use of a biological indicator.

Lantor Cube® **Bowie-Dick Test**

Test Packs should be used daily with dynamic air removal steam sterilizers (for example, Bravo or Elara sterilizers) to detect air leaks and ineffective air removal. Both reusable and disposable formats are available. Pack 30/pk, Latex Free - LCR-025

\$14,800

(Box of 100)

(Box of 1000)

Indicator Tape

Indicator tapes provide immediate identification of processed items while it also serves as a closure to seal sterilization packs. Colour change indicator verifies exposure to sterilization process. Tapes are individually packaged in 60 yard rolls and available in multiple widths. Tapes are available in both regular and latex/lead free versions.

Steam Indicator Tape roll 3/4" 1/2"

ST-072 ST-048 \$700 \$600

To identify and monitor items that are steam processed. ink changes from black to red when processed. Workson non-porous surfaces (metal, glass).

\$2900

SIP-001

Chemical Indicator Strips

Each chemical indicator (CI) strip provides distinct colour change when exposed to the sterilization process. An internal CI should be used within each package or tray to be sterilized. Four inch strip can be written on and kept as a permanent record. Eight inch strip can be used as is, or torn in half at the perforation for smaller packs. (250/bx)

4" SIS-250 \$2450

8" SIL-250

testing guidlines

Sterilization best practice quick guide (Canada)

Each Load

CSR Sterilization Wrap

- Highest BFE (bacterial filtration efficiency) available*
- Highly permeable (no wet packs)
- Made from environmentally-friendly cellulose
- Exceptional tensile strength (wet or dry)
- Use with EtO or steam sterilization processes
- Recommended use of two layers folded sequentially

Sure-Check™ Type 4 Sterilization Pouches

Built-in muli-parameter internal/external process indicators that change color when all three criteria for sterilization have been met - time, temperature and steam.

STEAMPlus™ Sterilizer Test Pack (one time per load)

Allows users to immediately release nonimplant loads with peace of mind from the STEAMPlus™ Sterilization Integrator, which is attached to a load record card.

STEAMPlus™ Type 5 Integrators (one time per pack)

Allow users to immediately release nonimplant loads with peace of mind from the STEAMPlus™ Sterilization Integrator.

Each Day

SporView[™] Plus Biological **Indicator Test Pack**

Allows users to immediately release nonimplant loads with peace of mind from the SporView™ Plus Sterilization Integrator, which is attached to a load record card.

SporView[™] Self-Contained **Biological Indicator**

An in-office biological indicator (BI) system certified for use with all steam sterilization cycles.

Biological indicator results are known after 24 hours incubation in any compatible dry block incubator operating at 55°C to 60°C.

AirView™ II Bowie-Dick Test Pack (for pre-vac sterilizers)

- Designed to detect the presence of air in prevacuum steam sterilizers
- Available in single-use
- Easy-to-interpret indicator sheet
- Ink will not fade after sterilization
- ISO 11140-5 Type 2 Compliant

Implant loads must be held until BI results are known.

Foot Balm Diabetic for very dry, sensitive skin, with 10% urea

Intensive care for very dry, rough and sensitive skin. A special combination of active substances with 10 % urea supplies the skin with moisture; supports natural skin functions and prevents dehydration. Especially suitable for diabetics.

CAM56002 \$13⁵⁰

Foot Deo Balm against foot odour, long-lasting

A mild concentrated cream that deodorizes and acts against foot perspiration, burning feet, soreness and itching between the toes. The special ingredient aluminum chlorohydrate protects against foot odour by preventing the bacterial decomposition of body perspiration. With mild ingredients, Foot Deo Balm offers dependable, long-lasting care and relief for sore feet too.

CAM8018.2

Fresh Hydro for very dry skin

(150 ml Bottle)
In addition to the
FRESHUP complex,
includes 10% urea,
balances moisture
loss, softens the skin,
makes it elastic and
more resistant. For the
care of very dry skin,
aloe vera gel is
included.

CAM8056

\$1590

Fresh sensitive for dry and sensitive skin

(150 ml Bottle)
In addition to the FRESHUP complex, includes 5% urea to balance moisture loss and soften the skin. In addition, to caring for sensitive skin, the anti-inflammatory and conditioning active ingredients of echium oil and cardiospermum are used. This renders the foam especially suitable for dry, sensitive skin, e.g. that of diabetics. CAM8055

\$15⁹⁰

FRESHUP Complex

(150 ml Bottle)
FRESHUP complex
found in all fresh foam
products - Camomile
oiol combined with
bisabolol, glycerine,
pathenol and
grape-seed oil to care
for and protect foot
skin. Lemon grass
and fruity oils provide
a gentle scent
CAM8056

\$15⁹⁰

Fresh Intense for cracks & calluses

(150 ml Bottle) Intensely caring balm with FRESHUP complex, 15% urea and shea butter. Callus formation is reduced by regular use and cracked, rough skin areas prevented. Non greasy, quickly absorbed, and protects the skin against drying out. CAM8057 \$1680

Email us at qua

Fissure Cream for rough and cracked skin areas

- smoothes extremely dry and flaked skin areas specifically on the elbows, hands & feet.
- stores moisture in deeper tissue layers
- soothes sensitive skin
- supports natural skin functions
- reduces callus
- supports regeneration of skin
- nourishes skin to render it soft and smooth CAM8080.2

FUDE Foam -**Protect and Care Sensitive** Skin against Fungus! 100 ml Bottle

The foam is quickly absorbed and doesn't leave a greasy film behind. Skin stays healthy, elastic and retains its natural protective qualities.

Application Shake well before use. Hold upside-down for application **CAM8071**

\$1600

FUDES Solution -Protect and Care Skin, **Toenails and Fingernails**

20 ml Bottle with glass pipette

A combination of antibacterial substances, benzoic acid, usnic acid and the antimycotic properties of undecylenic acid provide skin and nails with long-lasting protection against fungal attack.

The anti-inflammatory properties of bisabolol, the high quality active ingredients extracted from the witch hazel together with the proven effect of panthenol combine to protect and care for skin, toenails and fingernails. Regular application protects against fungal infection.

CAM8077

\$1200

FUDES Spray - Care and Hygiene with Fungal Protection

Antibacterial ingredients and alcohol disinfect and cleanse. Chamomile, gromwell root and the Asian marsh pennywort provide effective care for the sensitive between- toe zones where the skin is vulnerable and often subject to irritation. Antimicrobial and fungicidal properties derive from undecylenic acid and usnic acid (obtained from beard moss). **CAM8079**

100 ml Bottle

\$1800

Yards Callus Pro-spray for professional use only

Even faster and more effective with 20% urea and chamomile extract. Spray directly onto the callus & allow to act for 1-2 min. The callus is then easily mechanically removed with all common instruments. After callus removal, coat the skin well with nourishing balm to prevent reformation of callus

L250AC Package

The LifeDop ABI System features a portable bidirectional Doppler with compact printer for the diagnosis of Peripheral Arterial Disease (P.A.D.). The system includes Doppler, printer, adhesive-backed label paper, bi-directional probe, ABI charts, forms, ABI video, examination guide, quick reference guide and ABI glossary, with 4 cuffs and aneroid package.

The system includes:

- Compact Bi-Directional Hand-Held Doppler - auto-calibrated
- Modular printer with adhesive-backed label paper
- Automatic waveform scaling with fast printout
- 8MHz bi-directional probe
- 4 cuffs and Aneroid (10 & 12cm)
- ABI Chart and Report forms (pack of 50)
- ABI Video, Examination Guide, Quick Reference Guide, and ABI Glossary
- ICD9 Code listing

L150R

The LifeDop L150R features a non-display, hand-held Doppler with superior sound quality, extended battery life, enhanced probe sensitivity, user replacement probe cable, interchangeable probes and a full warranty.

Each Doppler comes with your choice of one probe. Popular choices include:

- **8MHz** Eases location of surface vessels with a narrow beam and pencil-style shape
- **5MHz** Eases location of deeper vessels with a medium beam and pencil-style shape
- **4MHz** Eases location of blood vessels with a broad, wide-angle beam

Jill's Pads

About PPT:

PPT is a medical grade soft tissue supplement and offers the highest level of protection against shock absorption and pressure that **won't flatten or bottom out. Thickness remains constant**. PPT is clinically proven for shock attenuation to protect and comfort your patients.

PPT bonds easily to any orthotic or prosthetic device, brace or assembly. It conforms easily to a wide variety of athletic accessories. Used to protect bony prominences and tender areas with cushioning protection.

- Excellent for support, accommodations, forefoot extensions & balance padding
- · Skives, grinds, buffs, burrs easily & smoothly. Cut and shape to any size.
- · It has an abraded surface that improves adhesion and gluing and resists tearing and breakdown
- It can be used to line most any appliance, including orthotic, prosthetic, orthopedic and physical therapy modalities.

Instrument Packages Save when purchased as a package!

At Quality FootCare, we maintain a simple philosophy, "we like happy customers." This is why all QFC reusable surgical instruments are covered by our unrivalled lifetime guarantee.

Should any of our reusable instruments crack, bend, deform, corrode or fail while being used for its intended purpose, we will simply replace it with a new one or repair it free of charge. This guarantee applies throughout the working life of our instruments.

We do not require any purchase order numbers, copies of invoices or other proofs of purchase. The QFC brand on the product acts as your guarantee. All we ask is that the instrument is cared for and not abused. Our guarantee does not cover wear and tear. Please refer to our recommended procedures for care, maintenance and sterilization of QFC surgical instruments on page 60.

Should any of our products require attention at any time, please call us at 1-866-833-9352 or by Email at quality@qfootcare.com

Single-Use Instruments

The Story of DMI Single Use Instruments

DMI has a Class 7 medical grade cleanroom, used for the packing of single use stainless steel medical instruments. Built and operated in accordance with the strict protocols and methods necessary to create and maintain a highly controlled environment, the cleanroom is microbiologically tested every three months and fully validated every year.

DMI recently expanded the business with significant investment in its own on-site Ethylene Oxide (EtO) sterilising chamber. EtO sterilisation is ideal for disposable products because it safely sterilises delicate devices that cannot support conventional high temperature steam sterilisation, working at a low temperature but with high efficacy.

Single Use Instruments - FAQ

How do I know if a device is for single-use?

It will have this symbol on the packaging or the device:

What does single-use mean?

Do not reuse. A single-use device is used on an individual patient during a singleprocedure and then discarded. It is not intended to be reprocessed and used again, even on the same patient.

Is single-patient use the same as single-use?

No. Single-patient use means the medical device may be used for more than one episode of use on one patient only; the device may undergo some form of reprocessing between each use.

Why shouldn't they be reused?

Serious incidents relating to reuse of single-use devices have occurred. Reuse can be unsafe because of risk of:

- cross-infection inability to clean and decontaminate due to design.
- endotoxin reaction excessive bacterial breakdown products, which cannot be adequately removed by cleaning.
- patient injury device failure from reprocessing or reuse because of fatigue, material alteration and embrittlement.
- chemical burns or sensitisation residues from chemical decon tamination agents on materials that can absorb chemicals.

Also, if you reuse a single-use device you may be legally liable for the safe performance of the device.

Can I sterilise a single-use device?

A few single-use devices are marketed as non-sterile. These may require processing, in line with the manufacturer's instructions, to make them sterile and ready for use.

You must not resterilise them.

this Thin-Bladed Thwaites!

Blacks File (Found in all 6 Podiatry Packs)

PS3010

\$780

Shipping of Single-Use Podiatry Packs

Single use sets are one of the few products we charge a delivery cost. Most orders of other products ship for free when the order reaches \$100. We subsidize the cost so you pay less than the actual cost we are charged and it becomes a better value for you on larger orders. For example, ten sets ship for \$10 and 100 sets ship for \$30.00.

Personal Single Patient Use

(Some examples shown below)

Personal patient nail care products from QFC are a low cost, yet good quality range of instruments, designed for single patient use, as an alternative to professional reusable or single use instruments. Using personal single patient nail care products will help to protect your patients from infections borne from cross contamination. With simple care instructions, patients take their instruments home and bring them back for each appointment.

We recommend you first check what professional guidelines and health authority rules are in place that might govern the use of personal single patient use instruments before purchasing. Best practises regarding cleaning, sterilization and protecting your patients are constantly evolving.

Our nail cutters offer similar levels of quality that you would expect from QFC, but are made from lower specification steel as they are not designed for repeated autoclaving.

Please note that due to their intended use, all personal nail care products are excluded from our lifetime guarantee.

Personal Single Patient Options

(Four Popular Options)

All four sets are available at the same price of \$35.00 plus shipping. Unlike single use instruments, they are not sterilized and are not shipped in sterile packaging.

SPU Pack C comes with a 5.5 inch curved jaw nail cutter, single-ended blacks file and diamond foot dresser SPU Pack S comes with a 5.5 inch straight jaw nail cutter, single-ended blacks file and diamond foot dresser

SPU Pack C5 comes with a smaller 5.0 inch curved jaw nail cutter, single-ended blacks file and diamond foot dresser SPU Pack S5 comes with a smaller 5.0 inch straight jaw nail cutter, single-ended blacks file and diamond foot dresser

Personal single patient use instruments are available individually and packages can be design for you with other instruments (at different prices).

tournicots

Tourni-cot rings make it simple and easy to occlude vessels during digit surgery. Rolling the elastic ring onto the digit squeezes blood from the field. Once in place, the ring applies reliable pressure to act as an exsanguinating tourniquet. Apply after anesthetizing the digit, and remove by cutting the ring at its notch.

Recommended Procedures for Care, Maintainance and Sterilization of QFC Surgical Instruments

Unless alternative instructions are supplied with individual products, these instructions apply. All QFC instruments are supplied non-sterile unless specified otherwise. The use of all QFC instruments should be limited to qualified personnel. An investment in quality - When you purchase QFC instruments, you are investing in quality products. Care and maintenance will prolong their lives and afford the user with many years of trouble free service. Please follow the care and maintenance guide. A guide to the most common problems associated with instruments and their solutions is detailed for your reference.

Care before cleaning & Sterilization

After removing from packaging, QFC instruments should be cleaned and sterilized before use.

During cleaning and sterilization cycles do not mix dissimilar metal instruments. Keep stainless steel/ chromium plated/ silver plated instruments etc. separate and do not process in the same cycle; otherwise corrosion or staining may occur on the stainless steel instruments.

At all times ensure any solutions/ compounds that are used to clean/sterilize the instruments are neutral pH7. If low pH solutions are used they will cause black staining and high pH solutions will cause brown staining on the surface and in the joints of the instruments. If solutions do need to be used which are not neutral pH7, they must be thoroughly washed off afterwards by liberal amounts of demineralized water. In all procedures, ensure that the instruments are in their unlocked, open positions and that the joints are exposed to the cleaning/ sterilizing processes. If instruments are locked during sterilizing, stresses in the joints will be produced which will eventually weaken the joints and lead to fracture. The majority of QFC instruments that contain joints or metal-to-metal contact (e.g. scissor blades) are supplied pre-lubricated. We recommend after removal from packaging the instruments are rinsed and cleaned prior to sterilization.

We do not recommend "WD40" or other industrial lubricants for our instruments. A specially formulated lubricant, (Instrument Lube MIL3-700), is available from QFC that is excellent for surgical instruments lubrication.

Rinsing

After removal from packaging or immediately after use, the instruments should be washed/rinsed with warm running water. Care should be taken to remove all traces of blood, saliva, mucous, saline solutions or foreign debris, especially from serrations and joints. Nylon bristled brushes or cotton wool may be used to aid this process. Under no circumstances must iron wool, iron bristled brushes or abrasives are to be used.

The instruments should then be cleaned - see "cleaning" and then thoroughly dried. At this stage the instruments should be carefully inspected to ensure that their working parts

and function are not impaired.
Any instruments that have joints or have metal-to-metal contact should then be lubricated with instrument lubricants and stored in a clean and dry environment.

Cleaning

Hand washing is recommended, especially for Micro, Ophthalmic and delicate instruments. If machine washing or chemical cleaners are to be used, the manufacturers instructions should be followed.

Ultrasonic Cleaning

Ultrasonic cleaning is permissible (if instruments contain plastic components, check individual instructions supplied with instruments to confirm permissibility). After ultrasonic cleaning, the cleaning solution should be washed away by rinsing in demineralized water. The instruments should then be thoroughly dried and lubricated. We recommend Micro, Ophthalmic and delicate instruments are not ultrasonically cleaned as ultrasonic cleaning could impair the delicate cutting edges and tips of the instruments. Change ultrasonic solution regularly as recommended by solution manufacturer.

Disinfection

We do not recommend this form of cleaning. However, if no other option exists, it may be performed under strict guidelines. Disinfection may be performed by immersion or by washer sterilizers. Manufacturers instructions on concentrations of solutions and processing times should be strictly adhered to. After disinfection, wash thoroughly with sterilized water, dry the instruments.

Some disinfectants will cause corrosion to stainless steels. Allow minimum immersion time of instruments in solution as recommended by disinfectant manufacturer.

Change disinfection solution regularly and where recommended use corrosion inhibitors.

Caution Cleaning, rinsing, disinfection, and boiling render instruments "clean". They do not make instruments sterile.

Sterilization

Unless specified otherwise with instructions for individual products; sterilization may be performed by autoclaving, dry heat, flash autoclaving, gamma irradiation, cold sterilization or ethylene oxide.

We do not recommend "Glass Bead" sterilization - a process in which only the front, working end of the instrument is inserted into a heated vat of glass/silica beads. As this process may not destroy any migrating spores or bacteria which may be at other parts on the instrument away from the working end. This form of sterilization may also lead to instrument discolouration and early fracture - due to variable temperature gradient from the front to the back of the instrument.

Some instruments cannot be sterilized by all of the above processes. Consult individual instructions supplied with instruments that indicate suitable sterilization method. Do not allow temperature of sterilizers/ autoclaves to exceed 180 degrees centigrade, otherwise, the instruments may be discoloured or their strength (temper) may be impaired.

IMPORTANT:

ALWAYS sterilize instruments in their open positions.

Disengage all ratchets (locks) and ensure sufficient s urface of the joints is exposed to allow the sterilizing medium access to the surfaces hidden under the joints (box locks for example). If instruments are sterilized in a process where heat is involved and the instruments are left in their locked positions, the joints will crack.

After sterilization the instruments should be allowed to cool and fully air dry before use. Whichever process is used, adhere strictly to manufacturers sterilization instructions. Wherever water is used in sterilization procedures, e.g. in "steam autoclaving", we recommend salt free demineralized water is used instead of tap water. *Caution* For dry heat (hot air) sterilization we recommend paraffin oil is used to lubricate the joints and ratchets of instruments before sterilization.

Caution Avoid the contact of your surgical instruments with the following materials as these materials will cause discolouration/ corrosion that could lead to failure.

Abrasives, Aluminium chloride, Barium chloride, Betadine solutions, Bleaches, Bromine, Iodine, Mercury or its compounds, Peroxides, Potassium chloride, or any liquids, compounds which produce volatile/corrosive vapours.

Always be gentle and treat your instruments with care.
