# SWISS KRONO AQUA ZERO

## Come what may!

---

Children's water experiments, dog's unbridled joy, or a cat chasing a fly? Or maybe carrying shopping into the kitchen in wet shoes, artistic shows put on in the living-room and an overflowing pot with the Monstera plant? Which tests will you put your floor to today? Having all home laboratories, true experimental grounds in mind, we have created five collections of **SWISS KRONO AQUA ZERO** waterproof resistant panels.

**Resistant to water for up to 24 hours!**

### CLEANER FLOOR

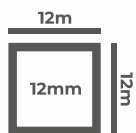

The **AQUA ZERO** technology consists in combining water resistant, high-density fibreboard (HDF) with the Aqua Pearl tight lock. The special, green HDF forms a solid panel core. Humidity, unpleasant odours, bacteria and dirt do not penetrate underneath. Frequent cleaning, also with steam mops, is completely safe.

### WATER RESISTANCE CONFIRMED BY AN INDEPENDENT TEST

According to the test carried out by NALFA – the American Agency of Manufacturers of Laminated Panels, with the Aqua Pearl lock the floor swells by only 7% after immersion in water for 24 hours. It is 8% less than required by the European Flood Standard EN 13329:2016 for products in the AC5 abrasion rating. The **AQUA ZERO** floor not only meets the 24-hour requirements of the NALFA test but it also ensures that all utility and aesthetic features will be maintained even after 72 hours from the moment of the accident with water.

### PERFECT FOR LARGE ROOMS – EVEN 144 M<sup>2</sup>

Floors without expansion joints even on large surfaces. The three-dimensional structure of panels emphasises the beauty of wood through the combination of matt, semi-matt, and satin tones. Surface resistant to intensive use is characterized by abrasion rating AC5, and even AC6. Each and every panel is finished with a four-sided V-groove. The panels are covered with a 30 or even 40-year wear resistance warranty.

### AQUA ZERO PANELS WILL SURVIVE THE TESTS OF:

- children
- domestic animals
- interiors open onto a garden
- frequent watering of potted plants
- washing floors with a steam mop

# PLATINIUM Sound

—  
Sound wave.

Solid structure allows one to lay as much as 120 m<sup>2</sup> of flooring without joints, even in the case of large loads.

High profile protects the room from loss of heat.

Rigid structure of planks ensures the most convenient assembly by means of click method.

---

If you were to imagine the most beautiful view of the world, what would you see after closing your eyes?  
A picture painted by a great artist or perhaps a landscape created by Mother Nature?  
As we well know... all art is merely an imitation of nature.
