

# Ohio Regional User Group

for PeopleSoft and Oracle Cloud

## Spring 2021 Conference

**Session Name:** Deliver A 'Cloud-like' PeopleSoft User Experience

**Presenters:** Scott Hirni, Appian

**Time:** May 20, 3:00pm

[Register](#)

### **Abstract:**

Today, PeopleSoft customers are looking for ways to open access and streamline delivered processes across pillars like Campus Solutions, HCM and FSCM. All, while aligning with the 'cloud UX' expectations of their users. The latest PeopleSoft delivered UI, Fluid is the first step toward delivering a modern, cloud-like user experience. However, adopting Fluid involves new development skills and can require optimization to align with the retirement of Classic pages.

In this session, attendees will learn how to build on their existing Fluid/Classic/Classic+ UX/UI configurations and elevate their user experience to directly align with the expectations of users today - intuitive, streamlined, and cloud-like. Learn how you can achieve these objectives with minimal development effort and no customizations to your PeopleSoft applications.

### Session Objectives:

- Create a modern, accessible and responsive Cloud like experience for students/employees by transforming delivered PeopleSoft transactions (regardless of application version) without customizing.
- Develop a strategic Fluid and User Experience (UX) roadmap.
- How to handle your existing PeopleSoft customizations in a pre 9.2 (no Fluid) and 9.2 (Fluid) installation.
