

CLOOS ROBOTIC WELDING AND CUTTING CELLS are a very productive way to address common metal fabrication issues. The issues are usually:

1. Worker safety
2. High quality demands
3. Worker retention
4. Constant focus on cost containment

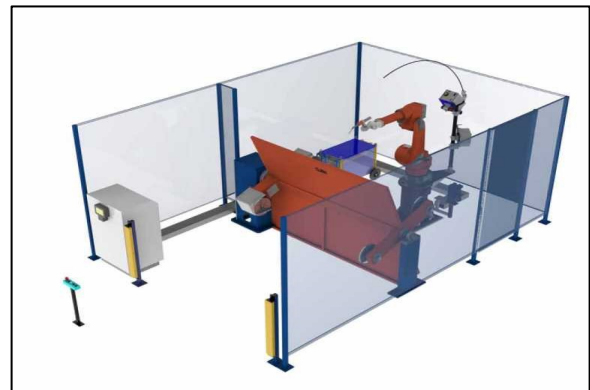

Utilizing robots in these production areas increases worker safety, provides a high degree of consistent quality of operation, keeps your employees focused on items and processes and addresses cost containment via reduction in time, materials and labor to produce the items your customers need.

Sunshine Automation & Tooling has been in this market for over 25 years and is a certified CLOOS Robotic Integrator. We focus on excellence in welding. We design/program/integrate several types of welding processes—MIG, TIG, Laser, Spot, Plasma as well as build the fixtures and tooling needed to augment the robot process. CLOOS has been the #1 welding systems manufacturer for over 100 years. Their products include Weld Robots, Weld Power Supplies, Welding Equipment, Welding Consumables, Welding Positioners (up to 100 tons standard capacity), Welding Robot Floor/Overhead Tracks, Welding Software and Welding Programming 3-D Software.

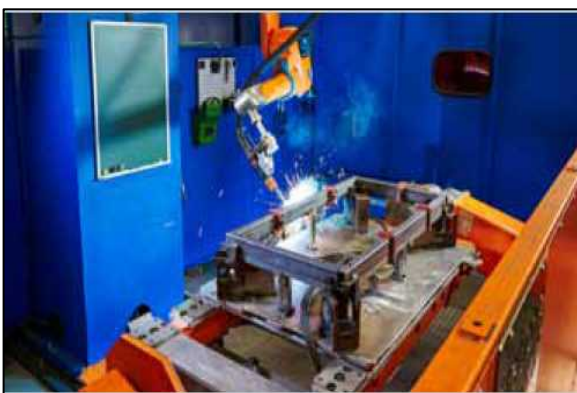

We would be thrilled to work with you and your team to discover where our welding domain expertise may be of beneficial service to your company. We also have the capability to automate up and down stream processes such as assembly, grinding, polishing and material handling. If this sounds interesting to you, please give us a call at 941.351.6330 to discuss your needs.
