A-level PHYSICS

Paper 2

Friday 8 June 2018

Morning

Time allowed: 2 hours

Materials

For this paper you must have:

- a pencil and a ruler
- a scientific calculator
- a Data and Formulae Booklet.

Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- Do all rough work in this book. Cross through any work you do not want to be marked.
- Show all your working.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 85.
- You are expected to use a scientific calculator where appropriate.
- A Data and Formulae Booklet is provided as a loose insert.

Section AAnswer **all** questions in this section.**0 1 . 1**

Explain what is meant by specific latent heat of fusion.

[2 marks]

0 1 . 2**Figure 1** shows how the temperature of the water is maintained in a hot tub.**Figure 1**

The hot tub system has a volume of 4.5 m^3 and is filled with water at a temperature of 28°C

The heater transfers thermal energy to the water at a rate of 2.7 kW while a pump circulates the water.

Assume that no heat is transferred to the surroundings.

Calculate the rise in water temperature that the heater could produce in 1.0 hour.

density of water = 1000 kg m^{-3}

specific heat capacity of water = $4200 \text{ J kg}^{-1} \text{ K}^{-1}$

[3 marks]

temperature rise = _____ K

0 1 . 3

The pump can circulate the water at different speeds.
When working at higher speeds the rise in temperature is greater.

Explain why.

Again assume that no heat is transferred to the surroundings.

[2 marks]

7

Turn over for the next question

Turn over ►

0 2 . 1

Define the electric field strength at a point in an electric field.

[2 marks]

0 2 . 2

Figure 2 shows a point charge of $+46 \mu\text{C}$ placed 120 mm from a point charge Q .

Figure 2

Position **P** is on the line joining the charges at a distance 66 mm from charge Q .
The resultant electric field strength at position **P** is zero.

Calculate the charge Q .

[3 marks]

 $Q =$ _____ C

0	2	.	3
---	---	---	---

Explain, without calculation, whether net work must be done in moving a proton from infinity to position **P** in **Figure 2**.

[2 marks]

Question 2 continues on the next page

Turn over ►

0 2 . 4

A small rubber ball coated with a conducting paint carries a positive charge. The ball is suspended in equilibrium from a vertical wall by an uncharged non-conducting thread of negligible mass. The wall is positively charged and produces a horizontal uniform electric field perpendicular to the wall along the whole of its length.

Figure 3 shows that the thread makes an angle of 30° to the wall.

Figure 3

The thread breaks.

Explain the motion of the ball.

[2 marks]

0 3 . 1 State what is meant by a capacitance of $370\ \mu\text{F}$

[2 marks]

0 3 . 2 The charging of a $370\ \mu\text{F}$ capacitor is investigated using the circuit shown in **Figure 4**. Both meters in the circuit are ideal.

Figure 4

The power supply of emf $9.8\ \text{V}$ has a negligible internal resistance. The capacitor is initially uncharged. When the switch is closed at time $t = 0$ charge begins to flow through resistor R . The time constant of the charging circuit is $1.0\ \text{s}$

Calculate the resistance of R .

[1 mark]

resistance of $R =$ _____ Ω

Question 3 continues on the next page

Turn over ►

0 3 . 3

Identify, with the symbol X on **Figure 5**, the potential difference (pd) across the capacitor when the switch has been closed for 2.0 s
Sketch the graph that shows how the pd varies from $t = 0$ to $t = 2.0$ s

[2 marks]**Figure 5**

0 3 . 4

Calculate the time taken for the charging current to fall to half its initial value.

[1 mark]

time = _____ s

0 3 . 5

Calculate the time taken for the charge on the capacitor to reach 3.0 mC

[3 marks]

time = _____ s

9**Turn over for the next question****Turn over ►**

0 4 . 1

State Lenz's law.

[1 mark]

0 4 . 2

Lenz's law can be demonstrated using a bar magnet and a coil of wire connected to a sensitive ammeter as shown in **Figure 6**.

Figure 6

The bar magnet is moved towards the coil and is then brought to a halt.

State how the reading on the ammeter changes during this process.

[1 mark]

0 4 . 3

During the demonstration an induced current is detected by the ammeter. The induced current is in the direction **E to F**.

Explain how this demonstrates Lenz's law.

[2 marks]

0 4 . 4

Figure 7 shows an arrangement for investigating induced emf.

Figure 7

As shown, the uniform vertical magnetic field is confined to the gap between the poles of the magnet. The plane of the square coil is horizontal and is made of conducting wire. The coil consists of a single turn and is attached by flexible wire to an oscilloscope.

The oscilloscope gives a reading of 2.9×10^{-4} V when the coil is moved at uniform speed from position **G** outside the field to position **H** inside the field, as shown in **Figure 8**.

Figure 8

Length of side of square coil = 32 mm

Magnetic flux density of uniform magnetic field = 0.38 T

Calculate the time taken to move the coil from position **G** to position **H**.

[2 marks]

time = _____ s

Question 4 continues on the next page

Turn over ►

0 4 . 5

The square coil is rotated through 360° at a constant angular speed about the horizontal axis shown in **Figure 9**.

Figure 9

Calculate the angular speed of the coil when the maximum reading on the oscilloscope is 5.1 mV

[2 marks]

angular speed = _____ rad s^{-1}

8

0 5 . 1

Suggest, with a reason, which type of radiation is likely to be the most appropriate for the sterilisation of metallic surgical instruments.

[1 mark]

0 5 . 2

Explain why the public need not worry that irradiated surgical instruments become radioactive once sterilised.

[1 mark]

Question 5 continues on the next page

Turn over ►

0 5 . 3

A student detects the counts from a radioactive source using a G-M radiation detector as shown in **Figure 10**.

Figure 10

The student measures the count rate for three different distances d . **Table 1** shows the count rate, in counts per minute, corrected for background for each of these distances.

Table 1

d/m	Corrected count rate / counts per minute			
0.20	9013			
0.50	1395			
1.00	242			

Explain, with the aid of suitable calculations, why the data in **Table 1** are **not** consistent with an inverse-square law. You may use the blank columns for your working.

[2 marks]

0	5	.	4
---	---	---	---

State **two** possible reasons why the results do **not** follow the expected inverse-square law.

[2 marks]

Reason 1 _____

Reason 2 _____

6

Turn over for the next question

Turn over ►

0 6

Figure 11 shows how radioactive decay of one nuclide can be modelled by draining water through a tap from a cylindrical tube.

Do not write
outside the
box

Figure 11

The water flow-rate is proportional to the pressure of the water. The pressure of the water is proportional to the depth of the water. Therefore the rate at which the depth decreases is proportional to the depth of the water.

Before the tap is opened the depth is 16.0 cm

The tap is opened and the depth is measured at regular intervals. These data are plotted on the graph in **Figure 12**.

Figure 12

0 6 . 1

Determine the predicted depth of water when the time is 57 s

[1 mark]

depth = _____ cm

0 6 . 2

Suggest how the apparatus in **Figure 11** may be changed to represent a radioactive sample of the same nuclide with a greater number of nuclei.

[1 mark]

0 6 . 3

Suggest how the apparatus in **Figure 11** may be changed to represent a radioactive sample of a nuclide with a smaller decay constant.

[1 mark]

0 6 . 4

The age of the Moon has been estimated from rock samples containing rubidium (Rb) and strontium (Sr), brought back from Moon landings.

 $^{87}_{37}\text{Rb}$ decays to $^{87}_{38}\text{Sr}$ with a radioactive decay constant of $1.42 \times 10^{-11} \text{ year}^{-1}$ Calculate, in years, the half-life of $^{87}_{37}\text{Rb}$.

[1 mark]

half-life = _____ years

Question 6 continues on the next page

Turn over ►

0 6 . 5

A sample of Moon rock contains 1.23 mg of $^{87}_{37}\text{Rb}$.

Calculate the mass, in g, of $^{87}_{37}\text{Rb}$ that the rock sample contained when it was formed 4.47×10^9 years ago.

Give your answer to an appropriate number of significant figures.

[3 marks]

mass = _____ g

0 6 . 6

Calculate the activity of a sample of $^{87}_{37}\text{Rb}$ of mass 1.23 mg

Give an appropriate unit for your answer.

[3 marks]

activity = _____ unit _____

10

0 7

A nucleus of polonium Po may decay to the stable isotope of lead $^{208}_{82}\text{Pb}$ through a chain of emissions following the sequence $\alpha \beta^- \beta^- \alpha$.

Figure 13 shows the position of the isotope $^{208}_{82}\text{Pb}$ on a grid of neutron number N against proton number Z .

Figure 13

0 7 . 1

Draw **four** arrows on **Figure 13** to show the sequence of changes to N and Z that occur as the polonium nucleus is transformed into $^{208}_{82}\text{Pb}$.

[2 marks]

Question 7 continues on the next page

Turn over ►

0 7 . 2

A nucleus of the stable isotope $^{208}_{82}\text{Pb}$ has more neutrons than protons.

Explain why there is this imbalance between proton and neutron numbers by referring to the forces that operate within the nucleus. Your explanation should include the range of the forces and which particles are affected by the forces.

[4 marks]

0 7 . 3

Many, but not all, isotopes of lead are stable. For example, $^{205}_{82}\text{Pb}$ decays by electron capture to become an isotope of thallium, Tl.

Write the equation to represent this decay, including the isotope of thallium produced.

[1 mark]

0 7 . 4

The thallium nucleus is formed in an excited state. Electromagnetic radiation is emitted from the thallium atom following its formation.

Explain the origin and location of **two** sources of this radiation.

[2 marks]

Source 1 _____

Source 2 _____

0 7 . 5

Other nuclides also emit electromagnetic radiation.

Explain why the metastable form of the isotope of technetium $^{99}_{43}\text{Tc}$ is a radioactive source suitable for use in medical diagnosis.

[2 marks]

11

END OF SECTION A

Turn over ►

Section B

Each of Questions **08** to **32** is followed by four responses, **A**, **B**, **C** and **D**.

For each question select the best response.

Only **one** answer per question is allowed.

For each answer completely fill in the circle alongside the appropriate answer.

CORRECT METHOD

WRONG METHODS

If you want to change your answer you must cross out your original answer as shown. 

If you wish to return to an answer previously crossed out, ring the answer you now wish to select as shown. 

You may do your working in the blank space around each question but this will not be marked.
Do **not** use additional sheets for this working.

0 8

The graph shows the variation of pressure p with temperature θ for a fixed mass of an ideal gas at constant volume.

What is the gradient of the graph?

[1 mark]

A 0.341

☐

B 0.395

☐

C 2.93

☐

D 5.00

☐

0 9

Two flasks **X** and **Y** are filled with an ideal gas and are connected by a tube of negligible volume compared to that of the flasks. The volume of **X** is twice the volume of **Y**. **X** is held at a temperature of 150 K and **Y** is held at a temperature of 300 K

What is the ratio $\frac{\text{mass of gas in X}}{\text{mass of gas in Y}}$?

[1 mark]**A** 0.125☐**B** 0.25☐**C** 4☐**D** 8☐**1 0**

The average mass of an air molecule is 4.8×10^{-26} kg

What is the mean square speed of an air molecule at 750 K?

[1 mark]**A** $3.3 \times 10^5 \text{ m}^2 \text{ s}^{-2}$ ☐**B** $4.3 \times 10^5 \text{ m}^2 \text{ s}^{-2}$ ☐**C** $6.5 \times 10^5 \text{ m}^2 \text{ s}^{-2}$ ☐**D** $8.7 \times 10^5 \text{ m}^2 \text{ s}^{-2}$ ☐**1 1**

A transparent illuminated box contains small smoke particles and air. The smoke particles are observed to move randomly when viewed through a microscope.

What is the cause of this observation of Brownian motion?

[1 mark]**A** Smoke particles gaining kinetic energy by the absorption of light☐**B** Collisions between smoke particles and air molecules☐**C** Smoke particles moving in convection currents caused by the air being heated by the light☐**D** The smoke particles moving randomly due to their temperature☐**Turn over ►**

1 3 The distance between the Sun and the Earth is $1.5 \times 10^{11} \text{ m}$

What is the gravitational force exerted on the Sun by the Earth?

[1 mark]

A $3.5 \times 10^{22} \text{ N}$

☐

B $1.7 \times 10^{26} \text{ N}$

☐

C $5.3 \times 10^{33} \text{ N}$

☐

D $8.9 \times 10^{50} \text{ N}$

☐

1 4 The graph shows how the gravitational potential varies with distance between two planets, **K** and **L**, that have the same radius.

Which statement is correct?

[1 mark]

A The mass of **L** is greater than the mass of **K**.

☐

B The gravitational field strength at the surface of **L** is greater than that at the surface of **K**.

☐

C The escape velocity from planet **L** is greater than that from planet **K**.

☐

D More work must be done to move a mass of 1 kg from the surface of **K** to a distant point, than 1 kg from the surface of **L**.

☐
