Specifications

SOLID ALDER BODY

A favorite choice of luthiers for many years. Alder is resonant, accepts lacquer well and is less susceptible to cracking than many other hardwoods.

NORTH AMERICAN MAPLE NECKS

Used on ALL Tradition Guitars and Basses, this choice wood has been favored by every great builder. No substitutes, no "mystery" wood, only the best possible neck wood available.

INDIAN ROSEWOOD FRETBOARDS

Why only Indian Rosewood? The fingerboard represents up to 40% of the rigidity factor for a guitar neck. Indian Rosewood can be dried efficiently and tends to be less susceptible to twisting. It also contains less moisture and oil resin that can compromise the ability to secure frets.

DIE CAST TUNERS

These tuners last longer and are smoother to the touch than open or covered gears. Ours cost more, but are worth the end result.

HIGH OUTPUT PICKUPS

All pickups are potted for low noise. This potting process eliminates the "microphonic" tendencies you find in many other pickups. The single coil pickups have Alnico-5 magnets for high output. The result is a pickup you can compare to any other on the market.

DUNLOP FRETWIRE

We now use Dunlop fretwire to insure consistent quality and long life for our Guitars and Basses.

GHS STRINGS

All Tradition Guitars and Basses now come with first quality GHS Strings.

The Tradition Guitar Company will always strive to give you the BEST components possible to make the BEST quality instrument for the price.
