

Fecal Incontinence: A Clinical Value Analysis

Trade secret in neurosurgery.....mannitol is sprayed to open the endothelial cell blood brain barrier because it is hyperosmotic and ionic polarity will enable self-reassembly.

Bioinformatics can establish the fact that mannitol also has hyperosmotic impacts on epithelial cells; i.e. the ones that constitute the defensive barrier for the body's organs.

Mannitol is use in many dietetic foods as a sugar substitute.

DIY to understand why 8 - 10% of the US population is known to have fecal incontinence!
