

# Forest Carbon Works

## Get Paid to Grow Your Trees

Historically, the carbon market was exclusive to large forest landowners. Now, with Forest Carbon Works, small landowners can also participate and earn annual payments for maintaining their forests and woodlands.

### Benefits

- Annual payment structure (guaranteed)
- Average payments of \$10-\$20 per acre per year or higher
- Forestry management advising from certified foresters
- Ability to incorporate your long-term forestry goals
- Freedom to continue to recreate and enjoy your forest
- Flexibility with harvesting

### Minimum Requirements

- 40 acres or more
- Private ownership
- Commercial harvest legally allowed
- Maintain ownership of timber rights
- Willing to enroll all forested properties
- Located in the continental US or parts of SE Alaska

### What is the Carbon Market?

The burning of fossil fuels for transportation, manufacturing, and industrial processes emits carbon dioxide into the atmosphere. Entities who are required by law to limit or offset their carbon dioxide emissions, as well as entities that are voluntarily offsetting their emissions, may purchase carbon credits that are generated from growing forests. As trees grow, they use photosynthesis to convert carbon dioxide from the air into wood. This process can be measured and values can be assigned in the form of carbon credits. Carbon credits can then be purchased by entities to help them reach their emission reduction goals. 1 carbon credit equals 1 metric tonne of carbon dioxide removed from the atmosphere.

## About Forest Carbon Works

- We are your preferred carbon professionals. Operating since 2016, we were the first to successfully implement a small forest carbon project and have gone on to complete more projects than any other company or organization
- We feature a streamlined approach that uses patented technology to provide you the greatest return and smoothest experience
- Built on the backs of forestry professionals, the Forest Carbon Works team hosts years of experience facilitating carbon projects across multiple carbon markets

### From Our Members

*"Caring for the land is my family's legacy. For us, stewardship means keeping the forest healthy and maintaining our property for future generations. Our Membership allows us to cover stewardship costs, property taxes, and helps us share the beauty of this rare old-growth forest with other like-minded people."*

- Bill Rowan

Located in Molalla, OR, the Rowan family's nearly 200-acre forest is a unique property containing pockets of rare old-growth. With the payments they've earned through Forest Carbon Works, the Rowans are conserving their forest for future heirs and helping to keep forest systems in their region healthy.
