## Tetrad Guide: TR13 S

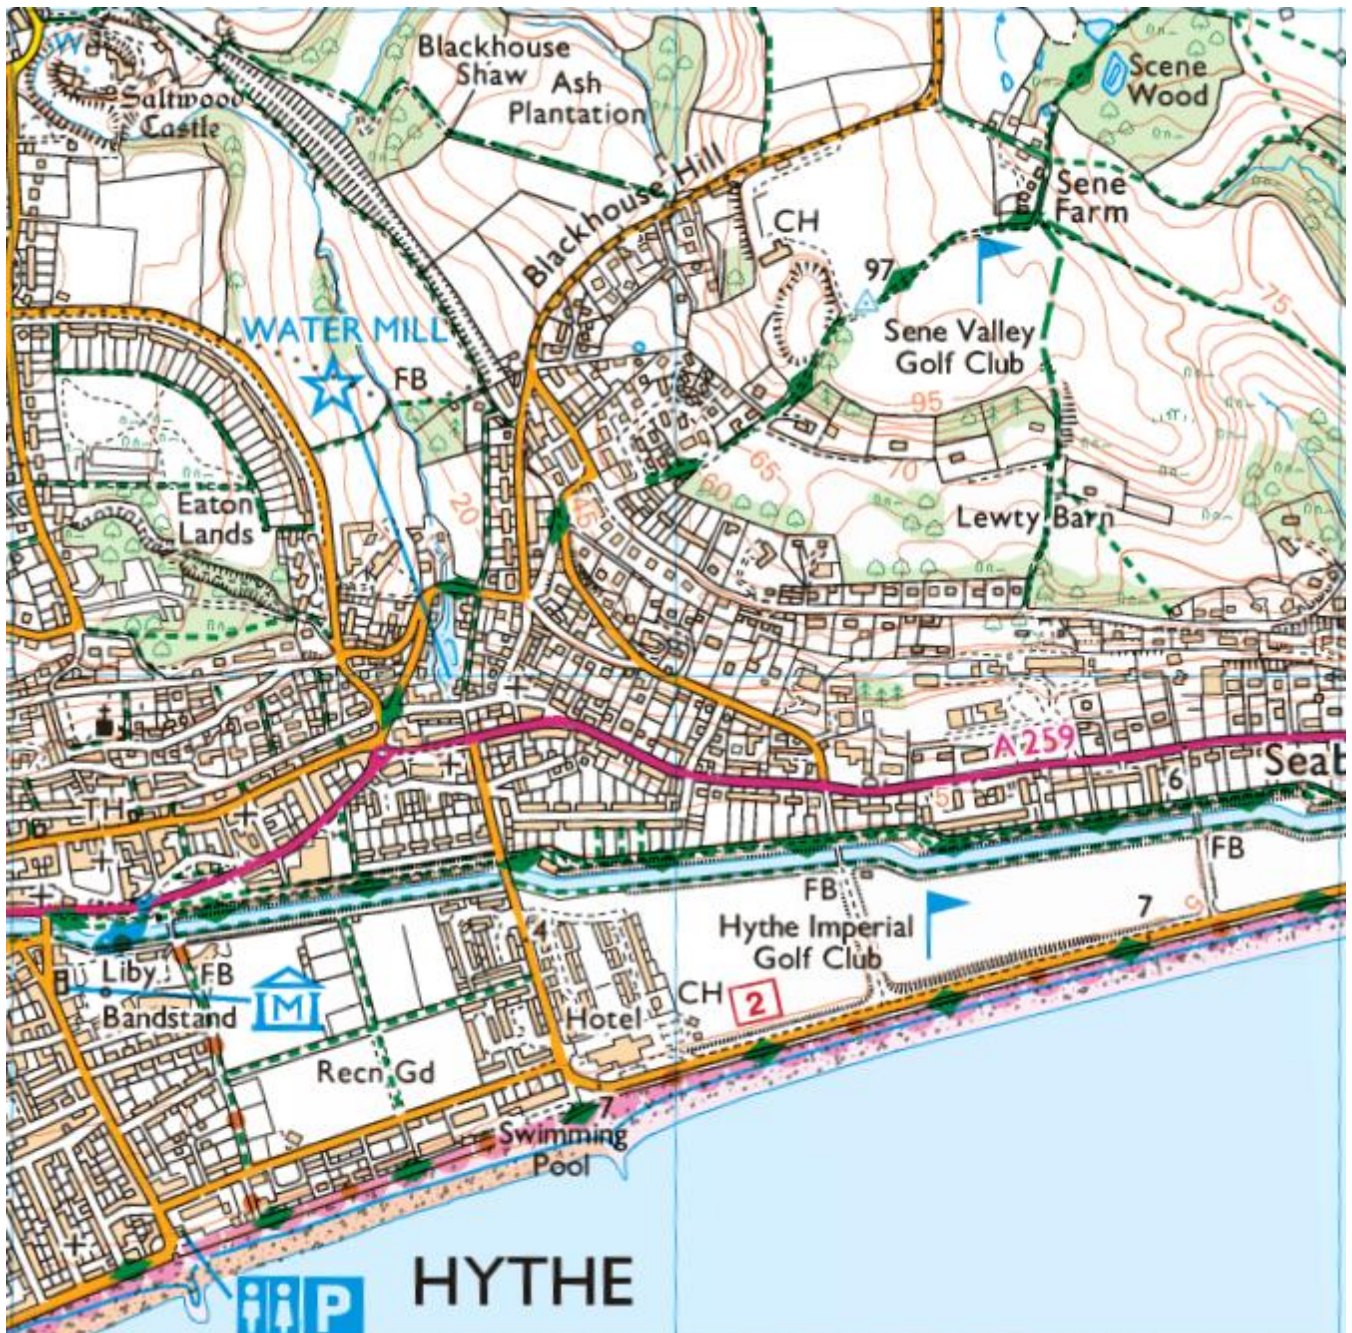

### (Hythe, Hythe Imperial Golf Course and Saltwood Castle)

#### Introduction

The tetrad TR13 S contains a section of coastline (which includes rock groynes opposite the ends of Stade Street and Twiss Road), most of Hythe Town, the Hythe Imperial and Sene Valley Golf Courses, and some areas of woodland and open country around Eaton Lands, Saltwood Castle, Blackhouse Shaw, Scene Wood and the western end of Paraker Wood. The Mill Lease stream runs from the northern boundary of the tetrad to discharge into the Royal Military Canal that crosses the southern half of TR13 S.

## Habitats and birds

The rock groynes opposite the ends of Stade Street and Twiss Road hold a wintering population of Purple Sandpipers, with up to six present in recent years, and these can be seen between late October and early May, with the hours around high tide being usually the most reliable. Turnstones and occasionally Rock Pipit may also be found here and Glaucous and Caspian Gulls have been seen on the beach.

Offshore Common Scoter, Great Crested Grebe, Guillemot, Razorbill and Red-throated Diver are regularly seen in winter, whilst Eider, Velvet Scoter, Goldeneye, Goosander, Red-necked Grebe, Slavonian Grebe, Little Auk and Shag have occurred in the bay, and in November 2016 a Forster's Tern spent a few hours feeding along the beach. Seawatching in spring and autumn can produce passage wildfowl, waders, terns (including Little and Black), skuas (including Long-tailed and Pomarine) and Black-throated Diver.

The town itself has a large proportion of older properties which are ideal for breeding Swifts, whilst the roof tops hold over 50 pairs of nesting Herring and in some years a pair of Lesser Black-backed Gulls. Waxwings occasionally occur in winter and a Yellow-browed Warbler was seen in the garden of The Bell Inn in September 2017.

The Hythe Imperial Golf Course regularly attracts migrant Wheatears and sometimes Whinchat, whilst Stonechats may overwinter. Gulls frequently roost here, often including Mediterranean Gulls, whilst Little, Caspian and Yellow-legged Gulls have occurred. Brent Geese have occasionally been seen on the golf course, with two White-fronted Geese in November 2020, whilst wet, cold or foggy conditions may attract waders, with Lapwing, Dunlin and Bar-tailed Godwit having been recorded. Snow Buntings sometimes occur on passage or during the winter and a Shore Lark was seen in 1996. Other rarities have included Short-eared Owl (in 2015 and 2020) and Hoopoe (most recently in 2012) – whilst the only proven breeding record of Hoopoe in the county was within this tetrad, in a nearby garden off Seabrook Road in 1948.

Areas of woodland and open country around Eaton Lands, Saltwood Castle, Blackhouse Shaw, Scene Wood and the western end of Paraker Wood hold the typical woodland species such as Tawny Owl, Stock Dove, Green and Great Spotted Woodpeckers, Nuthatch, Treecreeper, Bullfinch etc., Mandarins have bred near the Mill Lease stream, Buzzard and Hobby probably breed (or do so nearby and hunt here) and Scene Wood holds resident Marsh Tit and wintering Woodcock. Ring Ouzels have occurred at Blackhouse Ridge on passage and a Thrush Nightingale was heard singing near Saltwood Castle in May 2008.

The Royal Military Canal has breeding Mute Swan, Mallard, Moorhen, Reed Warbler, and possibly Kingfisher, Cetti's Warbler, Sedge Warbler, Grey Wagtail and Reed Bunting, whilst Water Rails are regularly seen in winter. It can attract unusual waterfowl with Egyptian Goose, Mandarin and Goosander having been recorded, whilst a juvenile Great Northern Diver (in December 2011) and a Black-necked Grebe (in October 2019) have also occurred, and in June 2020 a Night Heron was found.

The canal is lined with mature trees, particularly on its northern side, with some scrubby areas on the Hythe Imperial Golf Course and immediately to the east. These attract migrant crests and warblers, and occasionally Redstart, Pied and Spotted Flycatchers, Siskin, Redpoll and Brambling, whilst Blackcap, Chiffchaff and Firecrest overwinter.

Flyovers have included Black-winged Stilt, Black Stork, White Stork, Cattle Egret, Honey Buzzard, Black Kite, Hen Harrier, Rough-legged Buzzard, Osprey, Common Crane and Bee-eater. Red-backed Shrike and Wryneck formerly bred in the tetrad, ceasing to do so in the 1950s and 1960s respectively, and there is even an old record of Cirl Bunting seen in broom off the northern side of Cannongate Road in 1954.

### **Access and parking**

There is parking along the coastal road (Princes Parade) which provides good vantage points from which to view the bay and enables easy access to the beach. This is a pay and display zone between 1<sup>st</sup> April and 30<sup>th</sup> September but free at other times. There are footpaths at the middle and eastern ends of the Hythe Imperial Golf Course which lead to canal and this is flanked by footpaths on both sides throughout the length of the section within this tetrad.

There are a series of footpaths and bridleways which allow the inland areas to be covered. Parking is also generally free within Hythe though can get busy at times. Hythe is on the bus routes from Folkestone to Ashford, Canterbury and Lydd.

### Bird species diversity

A good variety of habitats in the tetrad TR13 S have led to over 200 species being recorded, with over 60 logged during the breeding bird survey, which ranks as the fourth richest in overall diversity and the third richest for breeding species amongst the 31 local tetrads as the table below demonstrates. The number of breeding and wintering species relate to those recorded in the 2007-2013 BTO/KOS atlas fieldwork.

	Total	Rank/31
Breeding species	62	3 <sup>rd</sup>
Wintering species	113	3 <sup>rd</sup>
Species recorded	206	4 <sup>th</sup>

The full list of species that have been recorded is provided as Appendix 1.

### Other Natural History

A mercury vapour moth trap was run regularly in the tetrad by Ian Roberts between 2004 and 2014, so there is a sizeable moth list and a number of rare and migrant species have been recorded. Of particular note were records of Dewick's Plusia in 2009 and Pale-shouldered Cloud in 2014, whilst at the time of their first occurrence Bloxworth Snout and Jersey Tiger were both very notable county records (having since successfully colonised).

Amongst the more regular migrants *Cydia amplana* (Vagrant Piercer), *Palpita vitrealis* (Olive-tree Pearl), *Convolvulus* Hawk-moth, Hummingbird Hawk-moth, Vestal, Gem, Four-spotted Footman, Bordered Straw, Scarce Bordered Straw, Tree-lichen Beauty, Clancy's Rustic and Delicate were notable. More recently a Death's-head Hawk Moth was found in the High Street in Hythe in October 2017 and in 2018 *Batrachedra praeangusta* (Poplar Cosmet), *Anerastia lotella* (Sandhill Knot-horn) and Sussex Emerald were added to the list from a trap run just to the east of the Hythe Imperial Golf Course.

Sean Clancy lived in the tetrad between 2019 and 2020 and added some very notable species, including the first area records of the Druid (which was only the second for the county, whilst there are less than 20 British records), *Bucculatrix maritima* (Saltern Bent-wing), *Gelechia senticetella* (Cypress Groundling), *Carpatolechia notatella* (Sallow-leaf Groundling) and *Eucosma tripoliana* (Saltmarsh Bell).

Other captures of particular note included *Caloptilia populetorum* (Clouded Slender), *Glyphipterix thrasonella* (Speckled Fanner), *Elachista subocellea* (Brown-barred Dwarf), *Acleris logiana* (Grey Birch Button), *Clavigesta sylvestrana* (Small Pine Shoot), *Elegia similella* (White-barred Knot-horn), *Ancylosis oblitella* (Saltmarsh Knot-horn), *Agrotera nemoralis* (Beautiful Pearl), Portland Ribbon Wave, Brown Scallop, Rest Harrow, Oak Processionary, Golden Twin-spot, Silver Barred, the Four-spotted, Small Mottled Willow and Oak Rustic.

Adventive species included the first British example of the Antipodean ***Sphirelata amotella*** trapped on the 14<sup>th</sup> June 2020 and the first area record of the scarce *Oinophila v-flava* (Yellow V Moth).

More recently a Raspberry Clearwing was attracted to a pheromone lure at Eaton Lands in August 2022.

A Camberwell Beauty was seen at Hythe in September 2006, whilst the more regular migrants Clouded Yellow and Painted Lady have also occurred. White-letter Hairstreak may be found on Wych Elm bordering the canal and in July 2017 a White Admiral was seen near the canal at Twiss Avenue. Other notable insect records have included Banded Demoiselle, Small Red-eyed Damselfly and Southern Oak Bush-cricket.

The Royal Military Canal provides suitable foraging and commuting habitat for bats and a good variety have been recorded, whilst marine mammal records have included Common and Grey Seal, Harbour Porpoise and Bottle-nosed Dolphin.

A list of all species recorded in the tetrad is provided below in Appendix 2.

### General History

The town of Hythe is considered to owe its origin to the decay of the ancient ports of Lympe (TR13 C) and West Hythe (TR13 H), successively, the harbours of which were rendered useless by the withdrawing of the sea. Hythe is known to have been a safe and commodious harbour for a considerable length of time until the same fate befell it. Its name is thought to derive from the Saxon word 'hithe', meaning a harbour or haven. It was granted a Cinque Port Charter in 1278. Hythe has many historic buildings and only some that are considered of particular interest are described here.

When the Norman Church of St Leonard's was built on the hillside above Hythe in around 1080 the high Street would have formed the quayside of Hythe. It is possible that the church incorporated an earlier Saxon place of worship and a Saxon-style arch is still plainly visible. The church was enlarged in 1120 probably using some of the craftsmen who built Canterbury Cathedral and further expansion a century later gave rise to the church present today, including the creation of the ambulatory (crypt), but many Norman features of this Grade I listed building can still be seen. The west tower of the church collapsed in 1739 and was subsequently reconstructed in 1750, largely through the generosity of the Deedes family, who later became owners of Saltwood Castle and many of whom are buried in the graveyard of St Leonard's (including William Deedes who is of interest for having established a notable bird collection which contained within it the first county record of Red-footed Falcon, shot at nearby Sandling Park (TR13 N) in 1862).

Church of St Leonard's (west tower)

Pulpit with mosaic work

Notable features within the church include the pulpit with its fine Venetian mosaic work, composed of 20,000 pieces, dating from 1875 and the especially fine marble reredos carved in 1881. There are two stained glass windows of particular interest. The main east window shows Christ, surrounded by angels, ascending to heaven. It was dedicated in 1951 and reflects the long-term role played by the town of Hythe in the front line of England's defence (the Victorian glass which once occupied the space was destroyed in 1940 by a German bomb).

Marble reredos

A Cinque Port ship can be seen in the panel at the bottom left, and an anti-aircraft gun and searchlights in the right-hand panel. In the south aisle a remarkable window commemorates 2nd Lieutenant Robert Hildyard who was killed, with over a million others, on the Somme in 1916. The window has a dreamy, surreal effect, and is a fine example of the art nouveau style.

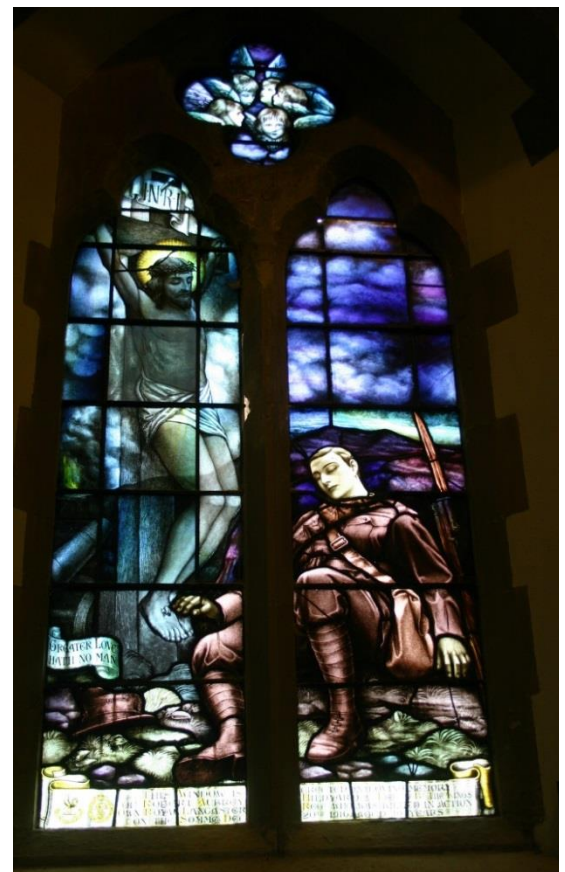

The crypt houses one of only two ossuaries to be found in England and consists of shelves that contain 1,022 human skulls, plus a single stack of bones and skulls measuring 7.5m in length, 1.8m in width and just over 1.8m in height. A sacred spring or 'holy well' is thought to have been situated close to St Leonard's Church but no trace now remains.

Probably the most famous feature in the tetrad is the grade I listed Saltwood Castle. It was probably erected on a Roman site, though Bronze Age implements and copper ingots discovered nearby show the site had already long been inhabited.

The castle's origin can be traced back to 488AD when Aesc, the son of Hengist and the King of Kent, built a fort on the site. This was replaced by a twelfth-century Norman structure, with work extending over the next two centuries. It is perhaps best known as the site where the murder of Thomas Becket is presumed to have been plotted, with four knights riding out from here for Canterbury Cathedral on the 29<sup>th</sup> December 1170 to commit the assassination.

It became uninhabitable as the result of an earthquake on the 6<sup>th</sup> April 1580, but was restored in the nineteenth century, as a residence of the Archbishop of Canterbury.

On the corner of Church Hill and Bartholomew Street sits a grade II\* listed house built in the 13<sup>th</sup> century, possibly earlier, which was the birthplace of Hamo de Hethe (b.1275) who became the Bishop of Rochester in 1319, after which he continued to use it as a summer residence. In 1685 it became St. Bartholomew's Hospital whence it remained until it was divided into two private flats in 1951 and became known as 'Centuries'.

The town hall, formerly The Guildhall, was built in 1794 and removed the need for town meetings to take place in the church. Until recent years the building was used as a Magistrates Court. The chamber itself, overlooking the High Street, contains not only paintings and other works relating to Hythe but a roll of Mayors and bailiffs of the Town dating from 1349.

Although a relatively recent construction, the Church of St Michael and All Angels' (built 1893 and also known as the Tin Tabernacle) is unusual in being one of the relatively few corrugated iron churches which remain in England and is one of the larger and more elaborate examples, which not only survives largely intact externally but retains the original fittings internally.

Saltwood Castle

The Royal Military Canal, which runs through the southern half of TR13 S, is a characteristic of a number of local tetrads. The canal is a coastal defence work that was constructed between 1804 and 1809 and its purpose was to separate the expected landing and deployment of Napoleon's troops upon the coast of Romney Marsh from the interior of the country and was the idea of Lt. Col. Brown, the Assistant Quartermaster-General.

The canal runs a total of about 28 miles from Seabrook via Hythe, inland to Appledore, then to join the Eastern River Rother at Iden lock, from where it became part of first the Rother and then the River Brede, turning into a canal again from Winchelsea to Cliff End on the coast. Excavated earth formed the banquette and parapet on the landward side of the canal and behind this was an army supply route, the Royal Military Road. On the opposite side were the tow path and wharves. It also included a back and a front drain. The canal and parapets were so built that gun positions could be provided at the end of each length to flank the crossings. However, by the time the canal was completed in 1809, the threat of invasion had passed following Napoleon's defeat at the Battle of Trafalgar, and it was to some extent obsolete. In 1810, the canal was opened for public use and tolls were also collected for use of the Royal Military Road. This section of the canal has hosted a biannual Venetian Fete (a tableaux of decorated floats in various themes) since 1890.
